

1. Write playbook to perform the tasks in the client machine.

-> Install java , download tomcat , copy Amazon.war and start the tomcat.

```
---
- name: Install Java, Download Tomcat, Deploy WAR and Start Tomcat
  hosts: all
  become: true

  tasks:

    - name: Install Java
      package:
        name: java-17-openjdk
        state: present

    - name: Create Tomcat Directory
      file:
        path: /opt/tomcat
        state: directory

    - name: Download Tomcat
      get_url:
        url: https://archive.apache.org/dist/tomcat/tomcat-9/v9.0.89/bin/apache-tomcat-9.0.89.tar.gz
        dest: /tmp/tomcat.tar.gz

    - name: Extract Tomcat
      unarchive:
        src: /tmp/tomcat.tar.gz
        dest: /opt/tomcat
        remote_src: true

    - name: Copy Amazon.war
      copy:
        src: /tmp/Amazon.war
        dest: /opt/tomcat/webapps/Amazon.war

    - name: Give Permission to Tomcat Scripts
      shell: chmod +x /opt/tomcat/bin/*.sh

    - name: Start Tomcat
      shell: /opt/tomcat/bin/startup.sh

    - name: Check Tomcat Status
      shell: ps -aef | grep tomcat
```
